

PAL

Patient Assist Lift

The PAL acts like a body splint and allows medical personnel to utilize proper body mechanics when lifting. Using the PAL reduces the risk of back injuries and promotes team lifting.

Key Benefits

- Reduces rescuer muscle strain up to 50%
- Decreases rescuer back injuries
- Protects patients, especially with brittle bones, thin skin or open wounds
- Foam padded for comfort
- Slick outer shell easily slides across multiple surfaces
- Can be used in a variety of places - bathtubs, cars, around tight corners

Versatile

Fits in Tight Places

The PAL is flexible and small enough to slide into confined areas. Once tightened, it becomes rigid and supportive.

Goes Around Corners

The PAL is great for narrow hallways, corners and other places where space is limited.

Available in XL (Full Body), Adult, Junior and Pedi.

The PAL is rated for 400 pounds but has been tested up to 1,250 pounds.

"The new PAL lift board was used, and workers were able to move my mom without hurting her, aggravating the leg wound, or pulling on her cancer-weakened bones..."

- Dallas Fire Captain

Easy & quick to apply, just two simple straps

Slides across a variety of surfaces

Provides complete encapsulation for infants and toddlers

Utilizing a trapeze grip allows for greater lifting ability
